

## Manlift Certification Grande Prairie

Manlift Certification Grande Prairie - The Elevated Platforms and Manlifts Certification course helps to provide the necessary training on the work practices, safe operating procedures, regulations and rules regarding the daily activities for the operators of this machinery. The program has been designed for people who are actively involved in these activities or those who have a basic knowledge of this machine.

In the past couple of decades, aerial platforms and manlifts have become a common sight in industrial maintenance applications and on construction job sites. These equipment provide an easy way to lift staff near what must be carried out on a stable platform apparatus, allowing staff to carry out tasks with greater safety and comfort rather than being perched on top of scaffolding or ladders.

Similar to every other tool, manlifts are just safe if they are utilized correctly. Since they elevate workers above floor or ground level, accidents can occur easily and this may lead to serious injuries or fatalities for both the manlift operators and whoever passerby who might not be lucky enough to be standing underneath.

Manlifts come in various kinds. Most fit into 1 or 2 categories: the scissor lift, that is capable of moving up and down and the articulating boom lift, that can move both horizontally and vertically.

### Protecting Staff

Right training is essential in regard to safety matters. Many of the companies that lease manlifts will offer training at the jobsite. Each and every worker who would be working on the equipment or operating it should receive training in safe operations. It is likewise essential that just those workers who have received training must be authorized to operate the controls. Communication rules and operating procedures must be clear. Hence, employees on the ground should not operate controls without the knowledge and approval of any staff in the basket.

The workers that occupy the basket will be required to wear the right fall protection gear which consists of a harness and lanyard. The fall protection connects to the manlift easily. The employee should make certain that he or she has made whatever adjustments required to reflect the change in fall distance if there are changes in the height of the work area.

Manlifts must be tested and inspected each day to make sure they are in safe operating condition. Prior to utilizing the machine, whichever defects need to be re-checked and fixed.
