

Manlift Training Grande Prairie

Manlift Training Grande Prairie - Different manlift training programs include the review and content of manlift devices. An important part of the course is the practicum where students show their knowledge and practical ability to safely operate a manlift. A requirement to Manlift training is the fall protection training, which can be incorporated in the training according to the specific requirements of the client.

Course Content

The course content consists of: pre-shift equipment check and work area survey requirements; the effect of performing unsafe acts or operating unsafe machines, Review of load capacities, Lifting device machine definitions, safety decals and specific equipment requirements, Review of related parts of the CSA Standards as well as the OSHA Standards and Review site particular Dangers, along with controls for safe use of a lifting device.

Demonstration and Evaluation Content

The demonstration and evaluation part of the program consists of: Using a spotter or a signaler when required; Proper personal protective equipment or likewise referred to as P.P.E. as required; using a lift only on level and solid ground; Utilizing the proper fitting harness or fall arrest device; Aware of load limitations etc. and other specs set out by the manufacturer; Operating the lift with all other workers clear of the job location; Having all associated machine stored safely on the lift platform; Pre-shift work area survey and machine check; Isolating off the work area when major work projects are to be carried out; and ensuring a safe and smooth operating speed for different plant conditions

Every person would be tested to make certain they could efficiently and safely use your site-specific equipment.

Manlift Safety

Since the manlift is capable of lifting personnel and materials more than 20 feet in the air, these machinery pose a particular amount of danger and could be dangerous equipment if not used correctly. Since the danger is so apparent, lift owners and operators are careful to properly maintain their equipment and follow proper operating procedures and safety measures. The ratio of accidents involving this particular machinery is rather low.

The safe use of the manlift, boom lift and scissor lift is up to the operator of that equipment. They must know all of the responsibilities that go with running the machine and how to utilize the lift vehicle safely. The most basic safety features on the machine are safety decals and the operating handbook. These show essential information regarding the maintenance, operating procedures and safety machinery.

A new model of manlift would come with the required decals in place and operating guidebooks. The operating manual must be found on the machinery at all times. If you are buying a used lift, it is important to make certain that the handbook is included and that important decals haven't been painted over. The restraints which prevent operators from falling and the guardrails are other important safety features. These are standard and mandatory on all types of lifts.
