

## **Aerial Lift Train the Trainer Grande Prairie**

Aerial Lift Train the Trainer Grande Prairie - The train the trainer program intended for aerial lifts helps to teach the trainers how to safely train prospective operators in an industrial situation. Trainers will be provided with in-depth instruction on the workings of aerial lift machinery. The program is offered on an open enrollment basis and delivered at selected training places. Prior to certification, trainers are assessed and graded based on their demonstrated skills and understanding.

The Aerial Lifts Train the Trainer Certification Program emphasizes practical learning. As the best training provider within the business, we offer the best hands-on training possible through opportunities to practice techniques and concepts taught inside the classroom. In addition to hands-on experience, trainers develop general understanding of instructional methods and equipment theory, classroom and field communication skills, and ability to efficiently train and evaluate operators. Trainers would gain knowledge of what traits make an effective trainer.

The Aerial Lift Train the Trainer Certification Program teaches the instructional methods included in communicating concepts within a classroom and/or field situation. Knowledge needs a training component to be efficient in workplace situations. There are three factors of equipment operation which the trainer must learn how to convey to operators: what to perform; how to do it; and the reason why it needs to be carried out.

The program offers up-to-date, detailed reference material to be able to help trainers convey the subject matter to machine operators. Instruction manuals include detailed information about all aspects of industrial mobile machine operator training. Incorporated in the package are training aids which provide a visual reference to improve the learning experience. The equipment-specific training products contain essential materials meant for both the operator and the trainer: overhead transparencies, videos/DVD's, safety message posters, kinds of equipment; digital training aids and stability pyramid.
